PREFACE	5
Part 1 THE GEOMETRY OF LIE ALGEBROIDS	13
1.1 The geometry of a total space of a vector bundle	16
1.1.1 Connections on vector bundles	16
1.1.2 Covariant derivative	20
1.2 Lie algebroids	23
1.2.1 Cohomology	23
1.2.2 Structure equations on Lie algebroids	24
1.3 The prolongation of a Lie algebroid over the vector bundle projection	26
1.3.1 Ehresmann nonlinear connection on Lie algebroid TE	30
1.3.2 Lagrangian formalism on Lie algebroids	39
1.3.3 Homogeneous connections	41
1.3.4 Linear connections on Lie algebroids	45
1.3.5 Torsion and curvature of a \mathcal{N} -linear connection	47
1.4 Dynamical covariant derivative and metric nonlinear connections on Lie algebroid TE	49
1.4.1 The case of SODE connections	52
1.4.2 Lagrangian case	54
1.5 The prolongation of a Lie algebroid over the vector bundle projection of the dual bundle	58
1.5.1 Ehresmann nonlinear connection on Lie algebroid TE^*	61
1.5.2 Regular sections and connections	65
1.5.3 Hamilton sections	70
1.5.4 Hamiltonian formalism on Lie algebroids	73
1.5.5 Duality between Lagrangian and Hamiltonian formalism	75

1.6 Dynamical covariant derivative and metric nonlinear connections on Lie algebroid $\mathcal{T}E^*$	78
1.6.1 Nonlinear connection induced by a \mathcal{J} -regular section	80
1.6.2 Hamiltonian case	81
1.7 Poisson-Lie algebroids	83
1.7.1 Poisson structures on Lie algebroids	83
1.7.2 Compatible Poisson structures	90
1.7.3 Canonical Poisson structure	92
1.8 Leibniz algebroids	95
1.8.1 Nambu-Poisson structures	98
1.8.2 Cohomology on Leibniz algebroids	100
Part 2 OPTIMAL CONTROL	102
2.1 Geometric viewpoint of the optimal control	103
2.2 Distributional systems	106
2.2.1 Holonomic distributions	109
2.2.2 Nonholonomic distributions	114
2.2.3 Distributional systems with no constant rank of distribution	119
2.2.4 Distributional systems with degenerate cost	125
2.3 Sub-Riemannian geometry	130
2.3.1 Grushin case	134
2.3.2 Heisenberg case	137
