

CONTENTS

Preface

vii

Chapter I. Mathematical Background

I.1.	Logic and Sets	1
	A. Mathematical logic (1); B. Sets (6)	
I.2.	Relations and Functions	10
I.3.	Algebraic Structures	20
I.4.	Hyperbolic Numbers	31
I.5.	Topological Structures	46

Chapter II. Relativist Background

II.1.	Non-relativist Events on a Straight Line	61
	A. Events on a line (61); B. Temporal midpoint (65); C. The line in a flow (67)	
II.2.	Relativity in a Wide Sense	70
	A. The idea of relativity (70); B. Relativity in Newtonian mechanics (75); C. Einsteinian relativity (77)	
II.3.	Relativist Events on a Straight Line	82
	A. The universe of relativist events (82); B. Relativity of time (87); C. Relativity of space (91)	
II.4.	Relativist Phenomena	97
	A. Proper time addition (97); B. Speed addition (99); C. Relativist mass and energy (103)	
II.5.	Relations between Events	106
	A. Accessibility (= Relativist causality) (106); B. Signal and incidence relations (110); C. Classifications (113)	

Chapter III. Indefinite Inner Products

III.1.	Inner Products. Classifications	117
III.2.	Fundamental Inequalities. Super-additivity	130
III.3.	Orthogonality	147
III.4.	Linear Operators	166
III.5.	Zeeman's Theorem	184
	A. The initial results (184); B. Extensions of Zeeman's Theorem (188); C. Similar results (194)	

Chapter IV. Miscellanea Hyperbolica

IV.1. Plane Chrono-geometry	199
A. Twin problems (199); B. Trievents (206); C. Angles (209); D. Areas (215); E. Euclidean hyperbola (220)	
IV.2. Multi-lattices	228
IV.3. Restrained Metrics	245
A. S.a. norms (245); B. S.a. metrics (256); C. Restrained s.a. norms and metrics (264); D. Restrained topological structures (273)	
IV.4. Bidimensional Analysis	281
A. Bidimensional continuity (281); B. Bidimensional convergence (283); C. Second order topological structures (289)	
IV.5. Relativist Dynamical Systems	300
A. General systems (300); B. Movement in space-time (305); C. Relativist stability (318)	

Chapter V. Structures of Discreteness

V.1. Unsuitability to Topology	329
A. Critical requirements for topologies (329); B. Fine topologies (334); C. Bornologies (336)	
V.2. Horistological Structures	340
A. Uniform horistologies (341); B. Horistologies (349); C. Operating with (u-) horistologies (364)	
V.3. Discrete Functions	374
A. h-continuity (374); B. Discrete functions (380); C. Uniformly discrete functions (391); D. Discrete instability (394)	
V.4. Emergence	397
A. Emergent nets and sequences (397); B. Horistological $\mathbb{R}$ (413); Worlds of emergence (420)	
V.5. Structural Discreteness	425
A. Discrete sets (425); B. Admittance (434); C. Unification by structural discreteness (439)
