CONTENTS

1. Introduction 7

2. Current issues and challenging problems 9

3. Modelling and simulation of chemical reactions based processes 13
3.1 Modelling of microbial growth processes. Equilibria and stability analysis 15
3.1.1 Nonlinear dynamical model of bioprocesses. Equilibria and stability 16
3.1.2 Microbial growth process on a single limiting substrate 18
3.1.3 Microbial growth process combined with an enzyme-catalyzed reaction 24
3.2 Pseudo bond graph modelling of wastewater treatment bioprocesses 28
3.2.1 Bond graph models of prototype bioprocesses 30
3.2.2 Bond graph model of the activated sludge bioprocess 36
3.2.3 Bond graph model of the wastewater biodegradation bioprocess 40
3.3 Modelling and simulation of a fermentation process via bond graph approach 48
3.3.1 Pseudo bond graph model of a prototype fed-batch bioprocess 49
3.3.2 Modelling of baker's yeast bioprocess 50
3.3.3 Simulation results and discussions 53
3.4 Modelling of culture cells for pharmaceutical industry applications 56
3.4.1 Pseudo bond graph modelling procedure 56
3.4.2 Modelling of monoclonal antibodies production process 57
3.4.3 Simulation results and discussions 61
3.5 Fundaments of the bond graph modelling of thermochemical processes 64
3.5.1 Bond graph modelling of the combustion process 64
3.5.2 Simulations 66
3.6 Modelling of a wood biomass combustion process 68
3.6.1 Bond graph model of biomass combustion process 69
3.6.2 Simulations results and discussions 72
3.7 Modelling of fast reactions mechanisms for biomass conversion processes 74
3.7.1 Modelling procedure and dynamical model 75
3.7.2 Simulation results and discussions 80

4. Estimation and control of chemical reactions based processes 85
4.1 On-line estimation of unknown kinetics for a wastewater biodegradation process 87
4.1.1 On-line estimation strategies. Model and problem statement 88
4.1.2 The design of an asymptotic state observer 90
4.1.3 On-line estimation algorithm based on a state observer technique 91
4.1.4 High-gain observer for the unknown kinetics of the bioprocess 92
4.1.5 Simulation results and discussions 94
4.2 Enzymatic synthesis of ampicillin: kinetics estimation and adaptive control 98
4.2.1 Problem formulation. Model of the enzymatic synthesis of ampicillin 99
4.2.2 On-line estimation of unknown kinetics with high gain observers 101
4.2.3 Adaptive control law design 103
4.2.4 Results and discussions 105
4.3 Nonlinear robust-adaptive control strategies for a lactic fermentation process 109
4.3.1 Process model and control objective 110
4.3.2 Design of estimation and control strategies 111
4.3.3 Simulation results and discussions 115

Bibliography 119
